

OUR SYSTEMS

Skid mounted systems for Fluid Handling applications is the primary business of EnviroSep. Our proven experience in engineering and manufacturing ensures that any skidded system meets specifications and performance expectations for Oil & Gas, Chemical, or Food & Beverage markets. Instrumentation and Controls are fully integrated with Transloading Skids, Custody Transfer Skids, and LACT Units to provide a completely functional system, deliverable to a site.

TRANSLOADING

EnviroSep's Transloading Systems are pre-manufactured, skidded systems used for the transfer of liquids in bulk handling applications. Whether transferring from Truck to Rail Car, Truck to Container, or Rail Car to Barge, EnviroSep can provide a solution that is specific to your application. While typically designed on a skid frame, our systems may be configured for portable applications.

CUSTODY TRANSFER

EnviroSep's Custody Transfer Systems are pre-manufactured, skidded systems used for the accurate measurement and transfer of liquids in bulk handling applications. Certified Meters and Batch Controllers, from leading manufacturers, are utilized in our complete system design. Any fluid handling need can be accommodated due to our experience in virtually every industry. Our in-house engineering licenses, ASME authorizations, Certified Welding Inspectors, and UL Listings ensure that you receive the highest level of integrity in a supplier.

OUR SYSTEMS

EnviroSep's LACT Systems are pre-manufactured, skidded systems used for the accurate measurement and transfer of petroleum products from the production site to trucks, pipelines, or storage tanks. EnviroSep utilizes the most reliable system components, from leading manufacturers, to provide the most reliable and robust system design. Our in-house engineering licenses, ASME authorizations, Certified Welding Inspectors, and UL Listings ensure that you receive the highest level of integrity in a supplier.

OPTIONS

- ASME PP-Stamp and National Board Registration
- Positive Displacement or Mass Flow Meter
- Seismic design, Wind Loading, Snow Loading, and PE stamp
- 3rd Party Inspections available
- Networked Communications
- BS&W Probe and Monitor
- BS&W Diverter Control Valve
- System Grounding and Truck Rack Monitoring

SPECIFICATIONS

- ANSI Class 150, 300, or 600
- UL/cUL Listing
- 50 or 60 Hz, 3-phase Power Supply
- Virtually any System requirements

OUR CERTIFICATION

EnviroSep Systems carry as standard an Underwriters Laboratories (UL) Listing as a Packaged Pumping System, and come equipped with an integrated, UL-Listed Industrial Control Panel. All systems are fabricated and welded per ASME, Section IX Code and Standards and are hydrostatically tested prior to shipment.

LACT SYSTEM

KEY FEATURES

- RELIABLE PUMPING
- ACCURATE METERING AND BATCH CONTROL
- AIR ELIMINATION
- INTEGRATED CONTROLS & AUTOMATION
- UL-LISTING AS COMPLETE SYSTEM
- VALIDATION TESTING PRIOR TO SHIPMENT
- PROVER CONNECTIONS
- IN-HOUSE AWS CERTIFIED WELDING INSPECTOR QC1 OVERSIGHT
